

Constructing a Contour Map

On Figure 6-10 (below) three stream courses appear as dashed lines. Elevation points (black dots with elevations shown in feet) have been surveyed along stream courses and

along stream divides. The 480-foot contour line has been provided. Draw all other contours, applying a 20-foot contour interval. Label each of your contours with its elevation.

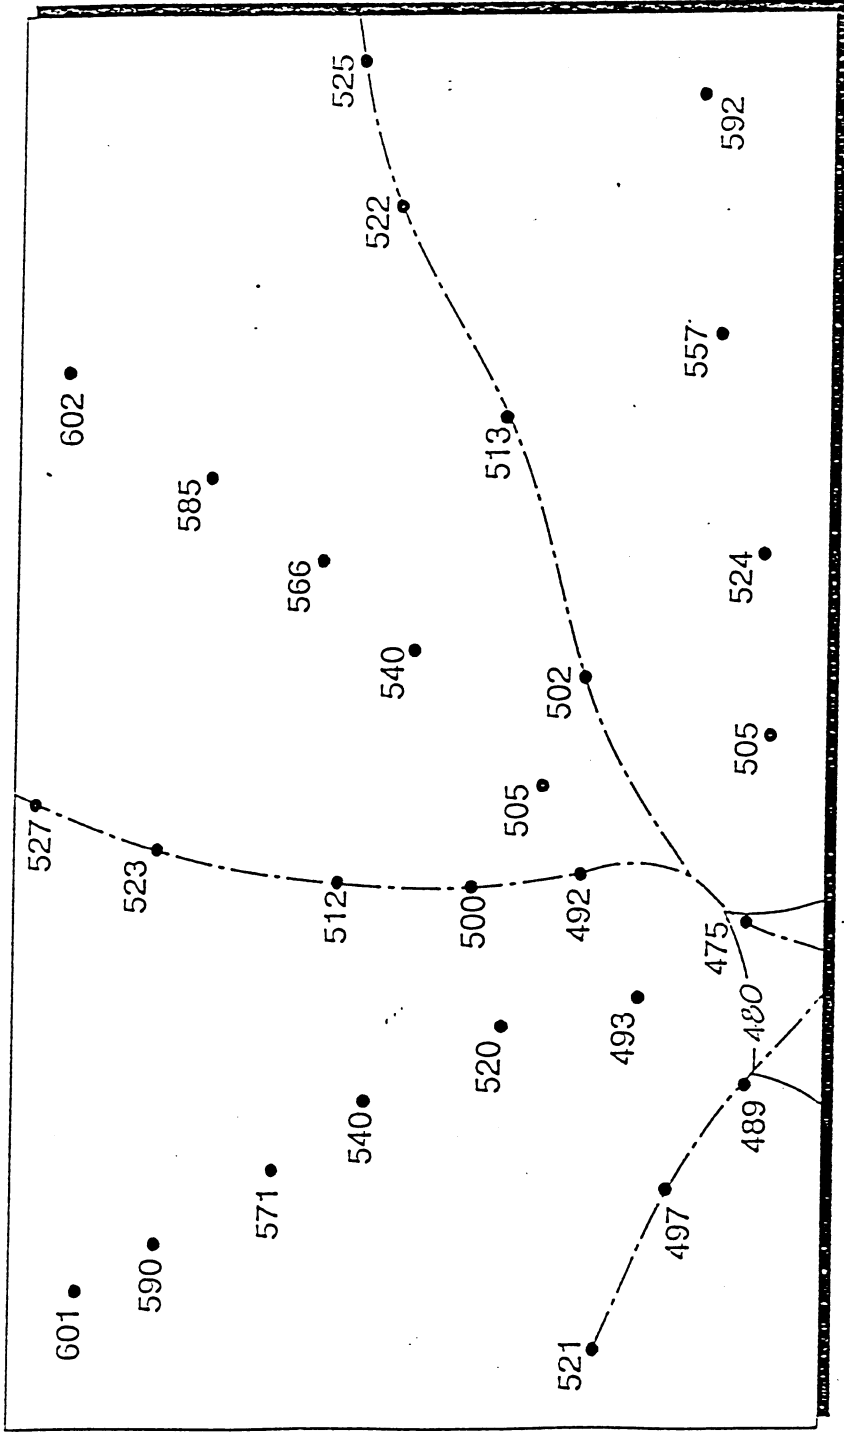

Figure 6-10. Base map for drawing a contour map. Stream courses and one contour line (at 480 feet) have been provided.
